

Automated Capsule Opening and Powder Extracting Machine

This multifunctional machine automates the process of opening capsules and extracting powder, specifically designed for shell 455 board applications. It features a stainless steel construction for hygiene and durability, and is mounted on casters for easy mobility.

Product Overview

Automated Capsule Processing

This multifunctional machine is engineered to automate the precise opening of capsules and the extraction of powder. Constructed from high-quality stainless steel, it ensures hygiene and durability for pharmaceutical and research environments. The unit is designed for mobility and efficiency, featuring an integrated hopper system for streamlined input and collection.

Technical Details

Compatible Formats

Shell 455 Board

System Components

- Input Hopper
- Dispensing Mechanism
- Collection Containers
- Caster Mobility System

Construction Material

Stainless Steel

Mobility

Yes

Primary Application

Pharmaceutical, Research & Development, Powder Extraction
