

Automated Container Filling, Capping, and Labeling Machine

This automated packaging machinery is designed for high-speed filling, capping, and labeling of containers. It features a rotary indexing system for precise container handling, stainless steel construction for hygiene and durability, and integrated control panel for operational adjustments.

Overview

Automated Packaging Solution

This automated packaging machinery is engineered for high-speed filling, capping, and labeling of containers. Featuring a robust rotary indexing system, it ensures precise container handling throughout the entire process. Constructed from durable stainless steel, the machine meets high hygiene standards while providing long-term operational reliability.

Technical Specifications

Construction Material	Stainless Steel
System Type	Rotary Indexing System

Key Features

Suitable For	Liquid Products • Solid Products
Process Capabilities	Filling, Capping, Labeling

Control & Operation

Control Interface	Integrated Control Panel
Adjustability	Yes
