

Automated Cutting and Winding Machine

This automated machine cuts and winds materials such as wire, cable, or textiles. It is designed for high-volume industrial material processing with safety features and a digital control panel.

Overview

Industrial Processing Efficiency

This automated cutting and winding machine is engineered for high-volume material processing, suitable for wire, cable, or textile applications. Featuring a robust metal frame and an integrated control panel, it offers precise operation through a digital interface. The design prioritizes safety and security, incorporating prominent emergency stop buttons and key-operated access control.

Operational Features

Control System	Digital display with button-based operation
Safety Standards	Emergency Stop, Key-Operated Security Switch

Construction

Primary Components

- Raw material reel
- Cutting mechanism
- Winding and collection area

Chassis Construction	Sturdy metal frame
