

Automated Foam Block Wrapping Machine

This automated wrapping machine utilizes advanced technology for efficient operation. It is designed to wrap foam blocks, preventing panel damage and reducing labor costs with its ability to wrap both ends of panels.

Product Overview

Advanced Automated Wrapping Technology

This automated foam block wrapping machine offers high-level automation by utilizing advanced manipulator technology to streamline the packing process. Designed to integrate foam blocks with panels, the system effectively prevents mechanical damage while significantly reducing labor costs. Its specialized design ensures superior waterproofing by sealing both ends of the panels, making it an ideal solution for high water-absorbing materials like rock wool sandwich panels.

Operational Features

Automation Level

High Automation • Manipulator-Controlled

Primary Benefits

- Labor cost reduction
- Damage prevention
- Enhanced waterproofing for panel ends
- Suitable for rock wool sandwich panels

Technical Specifications

Compatibility

Foam Blocks, Rock Wool Sandwich Panels, Panel Integration
