

Automated Glass Washing and Drying Machine

The automatic glass washing and drying machine is designed for efficient cleaning and drying of glass sheets. It features a robust frame with multiple rollers for supporting and transporting the glass.

Overview

Professional Glass Cleaning Solution

The Automated Glass Washing and Drying Machine is a high-efficiency system designed for the thorough cleaning and drying of glass sheets. Built with a robust frame and advanced transport rollers, it ensures consistent performance in demanding industrial environments. The integrated brush and spray system effectively removes debris, while the precision air drying unit leaves a spotless finish, making it an essential asset for glass processing facilities and automotive glass production lines.

Technical Specifications

Cleaning System

- Rotating brush system
- High-pressure spray nozzles
- Integrated air drying system

Ideal Applications

Glass processing facilities, Window manufacturing, Automotive glass production

Design & Build

Construction Features

- Robust heavy-duty frame
- Multi-roller transport system
- Adjustable thickness settings

Operational Flexibility

Yes
