

# Automated Injection Molding Machine

The YJK1200 series injection molding machine is a high-performance, automated system designed for efficient plastic part production. It features a robust clamping unit for secure mold closure and precise injection control for consistent part quality.

## Product Overview

### High-Performance Injection Molding

The YJK1200 series injection molding machine is a high-performance, automated system designed for efficient plastic part production. It features a robust clamping unit for secure mold closure and precise injection control, ensuring consistent part quality. The machine is equipped with an advanced control system for easy operation and monitoring of key parameters like temperature, pressure, and cycle time. Its modular design allows for flexible configuration to meet a wide range of production needs, from small intricate components to larger, complex parts.

## Technical Specifications

|              |                                     |
|--------------|-------------------------------------|
| Model Series | YJK1200                             |
| Machine Type | Automated Injection Molding Machine |

## Key Features

### Control Parameters

- Temperature Monitoring
- Pressure Control
- Cycle Time Management

|                   |   |
