

Automated Layer Chicken Feeding and Watering System

This automated system is designed for layer chicken farms, providing efficient feeding and watering solutions. It ensures consistent distribution of feed and water, promoting optimal poultry management.

System Overview

Automated Poultry Solutions

This automated layer chicken feeding and drinking line system is engineered for professional poultry farming environments. Designed for consistency and reliability, the system provides automated distribution of feed and water, ensuring optimal health and hygiene for layer chickens. With durable construction and easy-to-maintain components, this equipment helps farmers improve operational efficiency while reducing waste.

Technical Specifications

Automation Features

- Gear motor
- Sensor-based operation
- Automated feeding line
- Automated drinking line

| | |
|------------------------|----------------------------------|
| Pipe Diameter | 45 mm |
| Feeder Spacing | 0.75 m |
| Construction Materials | Hot-dip galvanised pipe, Plastic |

Key Benefits

Advantages

Easy Clean • Energy Saving • Reliable • Precise Temperature Control
