

Automated Linear Container Washing and Filling Machine

This linear machine automates container cleaning and filling for diverse industrial uses. It utilizes a multi-stage system for pre-washing, washing, and rinsing, alongside an integrated filling mechanism for accurate volume control.

Overview

Automated Linear Container Washing and Filling System

This linear filling and washing machine is engineered for high-efficiency automated cleaning and filling processes across diverse industrial applications. It incorporates a multi-stage washing system—featuring pre-wash, wash, and rinse cycles—to guarantee optimal container hygiene. With an integrated PLC for precision control and a durable stainless steel construction, this system ensures consistent performance and reliability for your production line.

Technical Specifications

Washing Stages

- Pre-wash
- Wash
- Rinse

Construction Material	Stainless Steel
Control System	Programmable Logic Controller (PLC)

Safety & Compliance

Safety Features	Emergency Stop, Safety Interlocks
-----------------	-----------------------------------

Operational Capabilities

Automation Level

Fully Automated

Monitored Parameters

- Temperature
- Pressure
- Cycle Times
