

Automated Material Discharge System

This automated material discharge system is engineered for efficient and precise material handling. The system features a chain-driven mechanism and a rotating discharge component.

Product Overview

Automated Material Discharge System

This automatic discharge machine is engineered for efficient and precise material handling within demanding industrial environments. Built with robust construction and a durable finish, it features a reliable chain-driven system for controlled movement. The unit is designed to streamline operations in foreign engineering contracting and various large-scale engineering projects.

Technical Specifications

Application Suitability

- Industrial material handling
- Foreign engineering contracting
- General engineering projects

Drive System

Chain-driven

Construction Features

Robust construction, Blue painted finish, Integrated cable management
