

Automated Metal Sheet Cutting and Folding Machine

This shearing machine is designed for high-precision cutting and folding of metal sheets in metal forming applications. It offers automated cutting and folding capabilities, ensuring accurate and repeatable results.

Product Overview

Automated Precision Metal Processing

This high-precision cutting and fold-bend machine is engineered for advanced metal forming applications. It integrates automated cutting and folding capabilities into a single unit, ensuring highly accurate and repeatable results for diverse metal sheet processing tasks. Built with a robust frame and an advanced control system, it offers a user-friendly interface designed to maximize efficiency and performance in industrial environments.

Technical Specifications

Construction

Robust Frame • High Precision

Maximum Cutting Length

3 m

Core Capabilities

Automated Cutting, Folding, Bending, Metal Forming

Control System

Advanced Integrated Control System
