

Automated Painting Line System

Automated painting line designed for industrial applications. The system uses a conveyor to transport parts through pretreatment, painting, and drying stages, with spray nozzles ensuring even and efficient paint application.

System Overview

Industrial Painting Efficiency

The Automated Painting Line System is engineered for high-volume industrial applications, streamlining the finishing process with precision. The integrated conveyor system ensures seamless movement through essential stages including pretreatment, painting, and drying. Designed for versatility, this system delivers consistent, high-quality finishes across a diverse range of materials.

Technical Features

Process Stages

- Pretreatment
- Automated Painting
- Drying

Core Components

- Conveyor System
- Precision Spray Nozzles

Suitable Applications

High-Volume Production, Industrial Finishing
