

Automated Panel Wrapping Machine

This automated wrapping machine utilizes a manipulator to perform all functions. It wraps foam blocks with panels to prevent damage, reduce labor costs, and applies adhesive to both ends of the panels.

Overview

Automated Panel Wrapping Machine

This automated wrapping machine utilizes leading technology to streamline panel packaging processes. By employing advanced manipulator functions, the system enables fully automated operation that bundles panels with foam blocks to prevent damage and reduce labor costs. It is specifically engineered to provide superior protection, including effective waterproof wrapping for both ends of materials like high water-absorbing rock wool sandwich panels.

Operational Features

Automation Level

Fully Automated • Manipulator-Controlled

Primary Advantages

- Labor cost reduction
- Advanced damage prevention
- Superior waterproof wrapping
- End-to-end protection for panels

Application Suitability

Supported Materials	Rock wool sandwich panels, Stackable panels, Foam blocks
Waterproofing Capability	Yes
