

Automated Paper Container Forming Machine

This automated machine is designed for high-volume production of paper containers. It features a programmable logic controller (PLC) interface for precise control of forming parameters, a material feeding system, and a safety enclosure.

Overview

High-Efficiency Forming Solution

This automated paper container forming machine is engineered for high-volume production of various paper-based items, including cups and bowls. It features a robust frame design and integrates advanced pneumatic and mechanical components to ensure consistent, reliable operation. With a programmable logic controller (PLC) interface, operators can achieve precise control over forming parameters to meet specific production requirements.

Technical Specifications

Control System	PLC (Programmable Logic Controller)
Operation Type	Automated
Construction	Robust Frame, Pneumatic Components, Mechanical Components

Production Capabilities

Compatible Products

- Paper Cups
- Paper Bowls
- Custom Shapes

Safety and Efficiency

Safety Features

Safety Enclosure

Production Focus	High-volume
