

Automated Paste Battery Production Line

Automated production line designed for manufacturing paste-type batteries. The system integrates modules for material handling, chemical processing, and electrical testing.

Overview

Automated Paste Battery Production Line

This automated production line is specifically engineered for the high-efficiency manufacturing of paste-type batteries. The system integrates advanced modules for precise material handling, chemical processing, and electrical testing to ensure consistent quality. It streamlines the entire assembly workflow, from initial paste application to final cell formation and quality control.

System Capabilities

Integrated Process Modules

- Automated Paste Application
- Component Assembly
- Cell Formation
- Quality Control Inspection
- Electrical Testing

Automation Level

Fully Automated • Industrial Grade

Primary Application

Paste-type battery manufacturing
