

Automated Plastic Film Winding Machine

This automated machine is designed for plastic film winding and unwinding processes. It features multiple winding stations equipped with rollers and tension control mechanisms.

Overview

Automated Plastic Film Winding System

This automated winding machine is engineered for high-volume plastic film manufacturing, providing precise material handling through a modular design. Featuring multiple winding stations, the system incorporates advanced tension control mechanisms to ensure consistent film quality during both winding and unwinding processes. Its robust construction and integrated control interface make it a reliable solution for industrial film processing lines.

Technical Specifications

Operation Type

Automated • Winding • Unwinding

Model Number

JJ-230

Design & Construction

Key Features

- Integrated tension control mechanisms
- High-volume production capacity
- Integrated control panel
- Precision roller system

Frame Structure

Modular blue frame

Winding Stations

2 stations
