

Automated Plastic Forming Machine

This precision plastic machinery is designed for manufacturing and processing plastic materials. The enclosed design ensures safety and precision in tasks such as injection molding and extrusion.

Product Overview

Precision Plastic Forming Solution

This automated plastic forming machine is engineered for high-efficiency production in the soft plastic packaging and rubber processing sectors. Designed for versatility, it supports manufacturing requirements across the pharmaceutical, foodstuff, and chemical industries. With robust construction and advanced control interfaces, it delivers consistent, high-quality output suitable for demanding industrial applications.

Technical Specifications

Model Identifier	CK6136
Primary Application	Soft Plastic Packaging, Rubber Processing, Injection Molding Support

Compliance & Quality

Quality Standards

ISO 9001

Global Market Presence

- Southeast Asia
- Middle East
- Africa
- Eastern Europe
