Overview

Automated Packaging Solution

This automated packaging line is a fully customizable system designed to streamline high-volume production. It integrates essential modules including product feeding, precision filling, capping, and labeling into a seamless, efficient operation. Built with durable stainless steel, the system is suitable for rigorous environments like food, pharmaceutical, and cosmetic industries, offering versatility for various container sizes and product types.

System Capabilities

Core Functions

- Bottle management
- Filling
- Capping
- Labeling
- Product feeding
- Conveyor transfer

Supported Materials

Liquid, Paste, Powder, Particles

Technical Specifications

Safety Features

Emergency Stop • Safety Interlocks

Construction Material

Stainless Steel

Control System

PLC (Programmable Logic Controller) with HMI Interface

Customization Options

Yes
