

Automated Product Wrapping Machine

This high-speed automatic machine efficiently and precisely wraps products. It features a rotary product feeding system, a label application unit, and a programmable logic controller for automated operation.

Overview

High-Efficiency Wrapping Solution

This high-speed automatic packaging machine is engineered for efficient and precise product wrapping in demanding industrial environments. It features an advanced rotary product feeding system and an integrated label application unit with multiple reel stations to streamline your packaging workflow. With a programmable logic controller (PLC) and an intuitive touchscreen interface, operators can easily manage parameters and monitor real-time performance for consistent, high-quality results.

Key Features

Automation & Control

- Programmable Logic Controller (PLC) for automated operation
- Rotary product feeding system
- Integrated label application unit
- User-friendly touchscreen interface for parameter adjustments
- Real-time monitoring capabilities

Certifications

CE

Construction

Build Quality

Constructed with durable materials designed for continuous industrial use.
