

Automated Production System

This system integrates manufacturing capability, a strong engineering foundation, and the latest in controls technology. It provides support for customer's production needs.

Overview

High-Precision Automated Production System

This automated production system is engineered for heavy-duty industrial applications, specifically focusing on cold reduction mills and thickness gauging systems. Designed for precision and reliability, the machinery supports large-scale manufacturing environments requiring robust operational capabilities. Its advanced design integrates hydraulic systems and sophisticated control panels to ensure consistent performance in demanding production workflows.

Facility Capabilities

Indoor Crane Capacity

125 ton

Max Lift Capacity

Facility Area

12550 sqm

Capabilities

Core Competencies

Cold Reduction Mills, Thickness Gauging Systems, Design, Manufacture, Assembly
