

Automated Retail Vending Machine with Card Reader

This automated vending machine is designed for retail environments. It includes a card reader, display, and printer for processing transactions.

Product Overview

Automated Retail and Access Solution

This advanced automated vending machine provides a comprehensive, unattended retail and access control solution. It features integrated cashless payment hardware, a high-resolution display for user interaction, and security-focused components for identity verification. Engineered for modern retail environments, this system ensures seamless transactions and reliable product dispensing.

System Capabilities

Operational Mode

Unattended • 24/7 Operation

Key Functionalities

Cashless Payments, Identity Verification, Receipt Printing, Automated Dispensing, Interactive Display

Hardware Components

Integrated Components

Component	Purpose
Card Reader	Cashless transaction processing
Display Screen	User interface and ID verification
Printer	Transaction receipt generation
Security Camera	User monitoring and security
