

# Automated Stainless Steel Ball Valve Assembly

This valve assembly features a robust stainless steel construction, ensuring durability and resistance to corrosion. An actuator provides automated control of the valve's opening and closing.

## Product Overview

### Automated Stainless Steel Ball Valve Assembly

This automated ball valve assembly is engineered for durability and reliability in demanding industrial environments. Featuring a robust three-piece stainless steel construction, it offers excellent corrosion resistance and longevity. The integrated automated actuator allows for precise control of valve operations, making it an ideal solution for critical applications in chemical processing, oil and gas, and water treatment sectors.

## Construction & Design

Material Construction	Stainless Steel
Valve Design	Three-piece ball valve
Connection Type	Threaded

## Automation & Control

Actuator Type	Automated
Actuator Housing Material	Durable Plastic

## Features

Key Features	Corrosion Resistant, Automated Control, Easy Maintenance, Protective Stem Tube
--------------	--

## Applications

### Suitable Industries

- Chemical Processing
- Oil and Gas
- Water Treatment
