

Automated Submerged Arc Welding Machine

This submerged arc welding machine is designed for automated welding processes. It is ideal for heavy-duty industrial applications requiring high-quality welds.

Product Overview

Automated Submerged Arc Welding Performance

This automated submerged arc welding machine is engineered for heavy-duty industrial applications requiring high-quality, consistent weld deposits. The system integrates a wire spool, a precise control panel, and a flux hopper, all mounted on a mobile base for improved maneuverability in diverse factory environments. Designed for efficiency and automation, this solution is ideal for high-volume metal fabrication projects.

Technical Specifications

Available Models	MJ-1000, MJ-1250, MJ-1600
Welding Method	Submerged Arc Welding (SAW)

Key Features

Main Components

- Wire Spool
- Control Panel
- Flux Hopper
- Mobile Base

Application Scope

Heavy-duty • Industrial • Automated

Mobility	Yes
----------	-----
