

Automated Turning and Forming Machine

This machine is designed for automated turning and forming in industrial applications. Its special mold plate design ensures consistent performance, accommodating various production demands.

Product Overview

Automated Turning and Forming Solution

The ED-12256S is a full-automatic turning and forming machine engineered for high-volume industrial applications. Designed for precision and consistency, this system streamlines the shaping process with its integrated automated mechanisms. It is an ideal solution for manufacturing environments that demand high repeatability and reliable performance.
