

Automated Vertical Escalator

This escalator provides automated vertical transportation between floors via moving steps. Handrails move in sync with the steps to ensure passenger safety and convenience.

Overview

Automated Vertical Transportation

This automated vertical escalator is designed for efficient passenger movement between building levels. Featuring a robust metal construction with a light-colored finish, it integrates synchronized moving handrails for enhanced passenger safety and convenience. The system utilizes a reliable track-based step mechanism to ensure smooth operation in high-traffic environments.
