

# Automated Weighing and Packing System

This automated system is designed for weighing and packing powdery and granular materials. It ensures efficient and precise packaging with electronic controls and safety mechanisms.

## ADDITIONAL IMAGES

## Overview

### High-Efficiency Automated Weighing and Packing

This automated weighing and packing system is engineered for the precise processing of both powdery and granular materials. Featuring a robust, modular design, it integrates seamlessly into existing production lines to enhance throughput and consistency. The system utilizes advanced sensor technology and high-quality electronic components to ensure stable, vibration-free operation and accurate weight control for every package.

## Technical Specifications

### Weighing Technology

- Three-point suspension support design
- High-precision weighing sensors
- Vibration-free stable weighing process

### Material Compatibility

Powdery Materials, Granular Materials

## Construction & Control

### Safety Features

Emergency Stop • Safety Guards

### Construction Material

Robust stainless steel

### Control System

Integrated PLC control for automated operation

## Performance Metrics

### Operational Efficiency

**100 %**

Precision Rating
