

Automated Wire Cutting and Stripping Machine

This high-precision machine is designed for automated processing of wires and cables. Its programmable control system allows for precise length and stripping adjustments, delivering consistent and accurate results.

Product Overview

High-Precision Automated Processing

This automated wire cutting and stripping machine is engineered for high-precision processing of various wires and cables. Featuring a programmable control system, it allows for exact length adjustments and consistent stripping results across multiple insulation types. The design incorporates advanced roller and guide systems for stability, alongside integrated safety interlocks for reliable and secure operation in professional manufacturing environments.

Key Features

Capabilities

Automated Processing, Programmable Control, High-Precision Cutting, Precision Stripping, Safety Interlock

Application Areas

Suitable For

- Electronics Manufacturing
- Automotive Wiring
- Cable Assembly

Technical Specifications

Operational Metrics

1 High

Processing Precision
