

Automated Wire Cutting and Stripping Machine

This automated wire stripping and cutting machine processes various wire types and sizes. It offers precision cutting and stripping, a user-friendly interface, and safety features suitable for high-volume production.

Product Overview

High-Efficiency Wire Processing

The ZDBX-5 is a precision-engineered automated machine designed for high-volume wire cutting and stripping tasks. It features a user-friendly interface that streamlines programming and operation, significantly reducing setup times for various wire types and sizes. Built for industrial environments, this unit prioritizes operator safety and consistent output quality to optimize production efficiency and lower labor costs.

Key Features

Operational Highlights

- Automated cutting and stripping precision
- Universal wire compatibility
- Intuitive programming interface
- Integrated operator safety protocols
