

Automated Wire Stripping and Crimping Machine

This stripping and crimping machine automates wire processing by integrating both operations. It is equipped with a terminal feeding mechanism and a crimping unit to ensure reliable connections.

Overview

Automated Wire Processing Solution

The SCTM-15 is a high-performance machine designed to integrate wire stripping and crimping into a single, seamless automated process. By combining these functions, it significantly increases production efficiency and reduces labor costs in high-volume environments. Built for precision and reliability, this machine ensures consistent connection quality for complex wire harnesses and cable assemblies.

Key Features

Functional Capabilities

- Integrated stripping and crimping automation
- Automated terminal feeding mechanism
- Precision crimping unit for consistent connections
- Programmable control panel for parameter adjustment
- Advanced operator safety features

Technical Specifications

Production Efficiency

15 SCTM
Series Model

Application Compatibility

Wire Harness Manufacturing, Cable Assembly, High-Volume Production
