

Automatic Aggregate Batching Machine

This batching machine consists of four storage bins and a metering chamber. The mixing process is automatically controlled by computer to finish material feeding, weighing, and the entire feeding process.

Overview

High-Efficiency Aggregate Batching

The PLD1600F automatic aggregate batching machine is engineered for precision and reliability in material proportioning. Featuring four dedicated storage bins and an advanced metering chamber, it streamlines the mixing process through fully automated computer control. Designed for consistent output, this machine ensures high accuracy in weighing and feeding, making it an ideal solution for medium to large-scale construction projects.

Technical Specifications

Model Number	PLD1600F
Storage Bins	4

Performance

Automation Level

Fully Automated • Computer Controlled

Key Benefits

- High accuracy weighing system
- Automated material feeding
- Efficient proportioning process
- Consistent material output
