

# Automatic Battery Charger for Automotive Applications

This is a fully automatic battery charger designed for various battery types. It features multiple charging modes and is suitable for automotive and similar applications.

## Overview

### Professional Automotive Battery Charging

The START 55 is a fully automatic battery charger engineered for reliable performance in automotive environments. Utilizing an advanced microprocessor system, it ensures precise charging cycles for various battery types. With built-in safety features like overcharge and short circuit protection, this unit provides a secure and efficient solution for professional maintenance needs.

## Performance & Safety

### Key Performance Metrics

**55 START**  
Model Series

### Safety Features

Automatic Voltage Detection, Overcharge Protection, Short Circuit Protection

## Technical Specifications

### Application Suitability

Automotive

### Charging System

Fully Automatic Microprocessor System

### Connection Hardware

Heavy-duty clamps
