

Automatic Bean-to-Cup Coffee Machine

This bean-to-cup coffee machine is fully automatic, brewing coffee directly from whole beans. It features a built-in grinder, digital display, programmable settings, and a thermal carafe.

Overview

Professional Automatic Coffee Solution

This fully automatic bean-to-cup coffee machine is engineered for high-efficiency brewing directly from fresh coffee beans. Featuring an integrated grinder and a thermal carafe, it ensures maximum flavor extraction and temperature retention for every serving. With programmable settings and a user-friendly digital interface, it offers a reliable and customizable coffee experience for professional environments.

Core Performance

Key Performance Metrics

1 Unit

Integrated Grinder

1 Unit

Thermal Carafe

Technical Features

Brewing System

- Fully automatic bean-to-cup operation
- Built-in precision coffee grinder
- Adjustable brew strength control
- Programmable delay settings

Interface & Controls

Control Interface

- Digital time and settings display
- Time Set functionality
- Delay Set functionality
- Intuitive button-based navigation
