

Automatic Beer Bottle Washing Filling Capping Machine

This series of machines integrates washing, filling, and capping into one unit. It can also be used for fruit juices and tea production with only a few parts changed.

Overview

Integrated Beverage Processing Solution

This automatic machine integrates washing, filling, and capping into a single, high-efficiency unit designed for professional beverage production. It is engineered to handle various liquids, including fruit juices and tea, with the versatility to adapt to mineral water filling through minor part adjustments. The system features a sophisticated beverage feedback design that minimizes oxidation and secondary pollution, ensuring a steady, accurate, and hygienic filling process.

Technical Capabilities

Compatible Beverages

- Fruit juices
- Tea
- Mineral water (requires part change)

Integrated Functions

Washing, Filling, Capping

Performance Metrics

Filling Performance

1 Unit

System Integration

Construction & Design

Material

Stainless Steel

Key Design Features

- Separate gas feedback system
- Non-contact beverage feedback
- Adjustable settings
- Safety controls
