

Automatic Blow Molding Machine

This automatic blow molding machine is designed for efficient production of plastic bottles and containers. It features a programmable logic controller (PLC) interface, precision molding capabilities, and robust construction for industrial applications.

Overview

High-Efficiency Blow Molding Solution

This automatic blow molding machine is engineered for the high-volume production of plastic bottles and containers. Featuring an advanced programmable logic controller (PLC) interface, it offers precision molding capabilities and consistent output quality. Built for robust industrial use, the system includes adjustable settings to accommodate a wide variety of bottle sizes and shapes, ensuring versatility for diverse manufacturing needs.

Technical Specifications

| | |
|-------------------------|--|
| Control System | Programmable Logic Controller (PLC) |
| Production Capabilities | High-Volume Output, Precision Molding, Adjustable Settings |

Safety & Construction

Construction

Robust Industrial Build • Safety Integrated

Applications

Suitable Products

- Plastic Bottles
- Plastic Containers
- Custom Shaped Plasticware
