

Automatic Bottling, Capping, and Labeling Machine

This automatic machine integrates bottling, capping, and labeling processes. It is designed for high-speed production lines within the beverage and food industries.

Overview

High-Efficiency Bottling Solution

This automatic bottling machine is engineered for seamless integration into high-speed production lines within the beverage and food industries. It combines filling, capping, and labeling processes into a single, streamlined unit. Featuring robust stainless steel construction, it offers precise control over critical parameters like filling volume and capping torque to ensure consistent product quality.

Technical Specifications

Model Number	DYGF32-32-10
Material	Stainless Steel

Performance Metrics

Key Performance Metrics

32 heads
Filling Heads

32 heads
Capping Heads
