

Automatic Bottling Machine

This automatic bottling machine is designed for filling, capping, and labeling bottles. It features a stainless steel construction, multiple filling heads, and an automated control system.

Overview

High-Efficiency Automatic Bottling Solution

This automatic bottling machine is engineered for seamless filling, capping, and labeling of various containers. Built with robust stainless steel, it ensures durability and hygiene, making it an ideal choice for beverage, food, and pharmaceutical applications. The system features multiple filling heads and an automated control interface, allowing for precise adjustments and high-throughput production efficiency.

Technical Specifications

Construction Material

Stainless Steel

Model Identifier

DYGF32-32-10

Process Capabilities

Filling, Capping, Labeling

Performance Metrics

Filling Heads

32 count

Filling Heads

Applicable Industries

- Beverage
- Food
- Pharmaceutical
