

Automatic Carbonated Drink Filling Machine

This automatic filling machine integrates washing, filling, and capping functions for carbonated drinks in PET bottles. Its design ensures a scientific and reasonable approach to high-efficiency beverage production.

Overview

High-Efficiency Filling Solution

This fully automatic carbonated drink filling machine is engineered to streamline production by integrating washing, filling, and capping into a single, efficient system. Designed for scientific accuracy and reliability, it is an ideal solution for packaging soda and carbonated beverages into PET bottles. The robust construction ensures durability, while its high-speed performance makes it suitable for scaling small to medium production operations.

Technical Specifications

Capacity

8000 BPH

Production Rate

Model	DCGF24-24-8
Filling Precision	<+1MM
Compatible Bottle Dimensions	Neck diameter: 50-100mm, Height: 150-320mm

Utility Requirements

Water Pressure	0.32 MPa
Water Consumption	2000 kg/h
Air Pressure	0.5 MPa

Features

Build Quality

Stainless Steel • Fully Automatic • High Efficiency

Integrated Processes

Washing, Filling, Capping
