

Automatic Carton Banding and Sealing Production Line

This automatic production line integrates carton banding and sealing into one system, reducing floor space requirements. It is engineered to streamline packaging operations, reduce labor costs and increase throughput.

Product Overview

Integrated Packaging Solution

The XFK-1C is an automatic production line engineered for comprehensive carton banding and sealing. By combining a semi-automatic sealing unit with a high-performance automatic strapping machine and a robust conveyor frame, this system streamlines end-of-line packaging operations. The design allows for flexible use, as both the sealing and strapping components can operate independently or as part of the integrated flow to maximize throughput and reduce labor requirements.

System Configuration

System Components

- Semi-automatic sealing machine
- High-automatic strapping machine
- Conveyor frame

Operational Flexibility

Integrated Production Line, Independent Sealing, Independent Strapping

Technical Features

Automation Level

Automated Feeding • Precise Tension Control

Build Quality

Robust industrial-grade construction for high reliability
