Overview

Automated Packaging Excellence

This automatic carton sealing machine is designed for high-efficiency unmanned operation, featuring advanced photoelectric detection and automatic wake-up functions. It seamlessly integrates into existing production lines and is easily adjustable to accommodate a wide variety of carton sizes based on specific customer requirements. Built with international brand electrical components and a robust frame, it ensures long-term reliability and professional sealing quality for demanding B2B packaging environments.

Key Features

Automation Features

- Photoelectric detection system
- Automatic wake-up function
- Automatic alarm system
- Unmanned automatic operation

Operational Benefits

- Easy specification changes and adjustments
- Direct integration with production lines
- Simple and convenient maintenance
- Simultaneous top and bottom flap sealing

Technical Design

Electrical Components

International Brand Components • Reliable Quality

Sealing Mechanism

New structure side-sealing head with consistent tape tension for stable quality.

Construction

Firm machine structure with reliable guide rod positioning and a deformation-resistant frame.

Safety & Compliance

Certifications

CE

Safety Systems

Emergency Stop, Protective Guards, Automatic Alarm

Application

Target Industries

Food and Beverage, Pharmaceuticals, Logistics, General Manufacturing

Carton Compatibility

Adjustable height and width to accommodate various carton sizes; customizable per customer requirements.
