Product Overview

High-Efficiency Concrete Leveling

This automatic concrete screeding machine is engineered for rapid, precise leveling and smoothing of large-scale concrete surfaces. Featuring a self-propelled system and adjustable vibration frequency, it ensures consistent depth and a superior finish across floors, pavements, and slabs. By automating the screeding process, this unit significantly reduces labor requirements while maintaining high-quality standards suitable for both indoor and outdoor professional applications.

Movement

Technical Specifications

Suitable Environments

Indoor • Outdoor • Large-scale Flooring • Pavements • Slabs

Control Features

- Adjustable vibration frequency
- Speed control panel
- Precise leveling mechanism
- Adjustable screed blade

Construction Materials

Aluminum Alloy
