

Automatic Double Drum Ironing Machine

This automatic ironing machine features a double drum configuration for high-volume laundry processing. It is designed for continuous operation with precise temperature control and automatic feeding and folding mechanisms.

Overview

High-Efficiency Double Drum Ironing Solution

The YZII series automatic ironing machine is engineered for high-volume laundry processing in demanding environments such as large hotels, hospitals, and industrial laundries. Featuring a sophisticated double drum configuration, this machine significantly increases throughput and reduces overall processing time. Its robust construction ensures reliable continuous operation, while integrated automatic feeding and folding mechanisms maximize workplace efficiency.

Key Features

Operational Capabilities

- Automatic feeding mechanism
- Integrated folding functionality
- Precise temperature control
- Double drum design for increased throughput

Application

Suitable Industries

Hospitality, Healthcare, Industrial Laundry

Performance

Core Design Benefits

High-Volume Processing • Continuous Operation • Enhanced Efficiency
