

Automatic Dumpling and Samosa Maker

This machine creates dumplings, spring rolls, and samosas through interchangeable molds. The output can be boiled, fried, steamed, or frozen, offering versatility.

Product Overview

Versatile Automatic Food Production

This automatic dumpling and samosa maker is designed for high-efficiency food production, capable of processing various items like dumplings, spring rolls, and samosas by simply changing the mold. Engineered with a compact structure and stainless steel construction, it ensures durability, hygiene, and ease of cleaning for professional environments. The machine features adjustable settings for dough thickness and filling volume, making it an ideal solution for hotels, canteens, and large-scale frozen food factories.
