Product Overview

Automated Packaging Solution

This automatic carton packaging machine is designed for the efficient weighing, filling, and sealing of food and pharmaceutical products. It integrates a conveyor system with robotic handling to streamline the end-of-line packaging process. The system is built to handle various box sizes, offering a scalable solution for high-volume production environments that require hygiene and precision.

System Capabilities

Target Industries

- Food Processing
- Pharmaceutical Manufacturing

Core Functions

Weighing, Filling, Sealing, Carton Packaging, Automated Handling

Technical Features

Safety Features

- Transparent safety barriers
- Automated control systems

Automation Components

- Robotic arm
- Conveyor system
- Automated weighing mechanism

Construction Material

Stainless Steel
