Product Overview

High-Efficiency Glove Production

This automatic glove lockstitch sewing machine is designed to deliver precise, high-efficiency performance for industrial glove manufacturing. It features mature technology with stable operation, ensuring consistent stitch quality and accurate positioning for various glove types. Built for high-volume production, the machine minimizes manual labor through automated features, making it a reliable solution for professional manufacturing environments.

Technical Specifications

Maintenance Requirements

- Apply grease before initial use
- Re-grease machine every 3 months of operation
- Regular cleaning of machine interior

Key Performance Features

High Efficiency, Precise Sewing, Accurate Positioning, Automatic Thread Trimming, Stable Performance

Operations

Operational Capabilities

Feature	Benefit
Control Panel	Adjustable stitch parameters for versatility
Thread Trimming	Automatic system reduces manual intervention
Sewing Head	High-speed operation for consistent output
