Product Overview

Industrial Precision Packaging

The Automatic Granular Weighing and Bagging System is engineered for the precise quantitative packaging of granular and powder materials across food, grain, flour, and chemical industries. This robust system features high-precision weighing capabilities and seamless integration with conveyor belts and sewing machines to support high-throughput operations. With an intuitive digital interface, it allows for efficient monitoring of total package counts and weight data, making it an essential solution for industrial scale automation.

Technical Specifications

Target Industries

- Food & Grain
- Flour Production
- Fodder Industry
- Sugar Processing
- Chemical Industry

Model Variants

DSC-1, DSC-2, DSC-5, DSC-25, DSC-50, DSC-100

System Features

Key Features

- Real-time weight and package count display
- Conveyor and sewing machine integration
- PC-compatible data communication interface
- Automated quantitative filling

Digital Connectivity

Yes
