

# Automatic Housing Insert Crimping Machine

This automatic crimping machine is designed for housing insert applications and features precise control. It automates housing insertion and component crimping, increasing efficiency and accuracy.

## Overview

### High-Efficiency Crimping Solution

This automatic machine is engineered for housing insert applications, streamlining the production process by combining cutting, stripping, and crimping into a single automated workflow. Designed for high-volume environments, it offers consistent material supply and precise control to ensure repeatable performance. With an output capacity of 2500 pieces per hour, it is an ideal solution for manufacturers looking to enhance efficiency and accuracy in their assembly lines.

## Performance Metrics

### Production Speed

**2500 pcs/hr**

Output Capacity

## Technical Specifications

Operating Voltage	220V, 2-Phase
Air Pressure	0.75 MPa

## Capabilities

Process Functions	Automatic Cutting, Stripping, Crimping, Housing Insertion
-------------------	---
