

Automatic Industrial Washing Machine

This industrial washing machine is designed for heavy-duty cleaning tasks. Its automatic control system ensures efficient and reliable operation in commercial and industrial laundry settings.

Product Overview

High-Efficiency Industrial Washing Solution

This industrial washing machine is engineered for high-capacity cleaning with a programmable microcomputer control system, offering high automation and stability. Built with a robust stainless steel structure and advanced vibration absorption technology, it ensures reliable performance and longevity even in demanding environments. Featuring versatile heating options and intelligent water level management, it is designed to optimize washing efficiency while minimizing energy waste and labor intensity.

Technical Specifications

Vibration Reduction Rate	98 %
Dry Slanting Load Resistance	40 %
Heating Modes	Steam, Hot Water, Electric
Material Construction	High-grade corrosion-resistant stainless steel

Performance Features

Core Operational Features

- Programmable microcomputer control
- Anti-creasing function
- Water reuse capability
- Automatic feeding system
- Variable frequency drive for quiet operation

Safety & Environment

Safety Features

Full closing structure • Door lock linkage • Automatic water level detection • Bearing protection system
