Overview

Precision Linear Cutter Maintenance

This automatic linear cutter grinder is a specialized machine tool engineered for the precision sharpening and maintenance of linear cutting tools used in metalworking and woodworking. It features a robust construction designed to minimize vibration and ensure consistent, high-quality grinding results. Equipped with an integrated coolant system and adjustable guides, the machine effectively prevents overheating while maintaining accurate cutter alignment for enhanced tool lifespan.

Technical Specifications

Key Features

- Automatic grinding operation
- Integrated coolant system
- Adjustable clamps and guides
- Robust base construction
- Multi-function control panel

Control Panel Functions

Function

Power Control

Grinding Wheel Start/Stop

Coolant System Activation

Directional Operation (Left/Right)

Model Identifiers

MB-250, MF-257, MF207

Performance Metrics

Suitable Applications

Woodworking • Metalworking • Tool Maintenance
