

Automatic Luggage Wrapping Machine with PLC Control

This luggage wrapping machine offers an automated wrapping process. It uses PLC control and baking varnish for efficient and durable operation.

Overview

Automated Luggage Protection

This automatic luggage wrapping machine utilizes advanced programmable logic control (PLC) to ensure reliable performance and user-friendly operation. Designed for high-volume environments like airports and hotels, it features a specialized pre-stretch carriage that achieves up to 300% stretch, significantly reducing film consumption. The unit combines industrial durability with an elegant, automotive-grade lacquer finish for a professional appearance.

Technical Specifications

Control System	PLC (Programmable Logic Control)
Pre-stretch Rate	300 %
Surface Finish	Automotive-grade lacquer

Key Features

Operational Features

- Programmable logic control
- High-efficiency pre-stretch carriage
- Adjustable film tension
- Rotating platform design
