

Automatic Multi-Point Shaft Straightening Machine

This machine enhances efficiency in each operation through servo and transmission technology. It achieves straightening precision up to 0.01mm using an advanced control system, visual technology, and robotics.

Product Overview

High-Precision Shaft Correction

This automatic multi-point shaft straightening machine is engineered for high-performance and high-reliability in industrial environments. It utilizes advanced automation to deliver precise correction for long shafts, ensuring consistent quality in high-volume production settings. The system is designed to be adaptable, providing customized solutions to meet diverse industrial requirements.

Key Features

Operational Capabilities

Automated Operation, Multi-Point Straightening, High-Precision, High-Volume Compatible

Safety & Control

Safety & Control Systems

- Integrated protective cage
- Emergency stop mechanisms
- Advanced control panel for programming and monitoring

Design

Construction Details

Features a robust frame construction designed for long-term durability and stability during the straightening process.
