

Automatic Nonwoven Shoe Cover Production Machine

This automatic machine produces disposable nonwoven shoe covers. It features a material feeding system, ultrasonic welding, and automatic cutting and folding mechanisms.

Overview

High-Efficiency Production

This automatic nonwoven shoe cover making machine is engineered for high-volume manufacturing of disposable shoe covers. Utilizing advanced ultrasonic welding and precise automated cutting and folding mechanisms, it ensures consistent quality and hygiene. The integrated control panel allows operators to easily adjust production speed and cover dimensions, making it an ideal solution for facilities requiring stringent contamination control like hospitals and cleanrooms.

Technical Specifications

Production Capabilities

- Automatic material feeding
- Ultrasonic welding technology
- Automated cutting mechanism
- Automated folding mechanism

Control System

Adjustable Speed, Adjustable Size, Digital Control Panel

Applications

Suitable Environments

Cleanrooms • Hospitals • Medical Facilities • Hygienic Environments
